

Battery Recycle Program

Which batteries can be recycled here at DEC?

Alkaline (AAA, AA, 9v, C, D) and nickel batteries. This includes button batteries. Please note, lead acid and wet cell batteries cannot be accepted as they are not compatible to be shipped in the bucket with alkaline and nickel batteries.

How must batteries be prepared?

To safely ship batteries, Department of Transportation regulations require that EVERY battery be taped at both ends to prevent short circuit and fire danger. Alternately, each battery may be placed in its own plastic bag.

Where are batteries collected for recycle?

The recycle bucket is in the management office located at 1625 Broadway, Suite 1430. The office is open Monday-Friday from 8:00 am-5:00 pm.

*Lead acid and wet cell batteries cannot be accepted as they are not compatible to be shipped in the same bucket with alkaline and nickel batteries.
